**Translates the following "Conceptual Schema" into a relational one by applying it in MySql Workbench to tables.**

Next, make an java aplication, where you perform the following actions:

- **Insert: Bus, drivers, places and routes in the DB.**
- **Update routes for day of the week.**
- **Delete routes, asking to the users:**
    - **Numdriver, idplace and register.**
- **Do queries:**
    - **Driver data asking to the numdriver.**
    - **Day of the week to the route asking to the city.**
    - **Drivers data that drive a bus asking to register bus number.**

NOTE: Attach to PDF file to explain it all the proccess in detail.
